Version 13.6 was released on 18 October 2012 and is the last version to support the Windows Server® 2003 Operating System for the download and system servers. Systems .NET Framework 3.5 is no longer supported by this version for the database server. General == In this release, the application of company logos has been improved. You can now install the application icon without the logo to use in the system tray. The application package contains icons with and without company logos for all the company logos. The company logo has been designed to be a bit smaller than it used to be and the text at the bottom of the logo has been updated to match the new design. You can see the installed companies from the menu under the File menu. The application server version (8083 and 8084) can be used with any version of SolidWorks. Version 13.6 provides an additional connectivity option for reporting, which provides the same data as the Report Server in .NET Framework version 3.5. It will be available in the Enterprise Edition only. Report Server Connectivity SolidWorks now includes the Report Server Connectivity extension (RSCon) for the Workbench, which provides the same data as the Report Server in .NET Framework version 3.5. You can install it only in the Enterprise Edition. The connectivity option can be used to run reports in Design Review. It can also be used to generate file-based reports, such as Excel files or PDF files, which can then be sent to the viewer and printed. SolidWorks Enterprise Viewer 13.6 Version 13.6 is based on the Windows Server 2012 Operating System. The multi-user mode has been enhanced for the download server and the system server. In addition, we now support the new multi-page file format (.new format). The Viewer now supports the 128-bit file format. Previously, you could install only the 32-bit versions of Viewer. 82157476af
